

IBM INTERNSHIP PROJECT REPORT

AI Student Assistant – An Agentic AI Study Planner

Agentic AI Project

Prepared for IBM Internship

Student Name: _____

College: _____

Department: Computer Science and Engineering

Academic Year: 2026

1. Project Overview

Project Title

AI Student Assistant – An Agentic AI Study Planner

Problem Statement

Students often find it difficult to manage study time, assignments, examinations and daily academic activities. They may not know what subject to study first or how to prepare a proper study schedule.

Brief Description

The AI Student Assistant is an Agentic AI-based system that helps students plan and manage their studies. The AI agent understands the student's requirements, creates a suitable study plan, prioritizes tasks and provides recommendations based on deadlines and available study time.

2. Objectives & Proposed Solution

Project Objectives

1. Create an AI-based study assistant.
2. Automatically prepare study plans.
3. Prioritize important academic tasks.
4. Help students manage their time.
5. Provide personalized study recommendations.
6. Demonstrate the working of Agentic AI.

How the Agentic AI Solution Works

The system receives student input, understands the request, analyzes subjects, deadlines and available time, creates a plan, prioritizes tasks and generates a final study schedule. When the student's situation changes, the agent can reorganize the remaining plan.

Key Features

- Study Plan Generator
- Task Prioritization
- Deadline Management
- Personalized Suggestions
- Academic Question Answering
- Adaptive Planning

3. Implementation & Results

Technologies / Tools Used

IBM watsonx.ai, IBM Cloud, Agentic AI, Large Language Model (LLM), Prompt Engineering, Python (optional implementation/support) and a web interface for user interaction.

Working Process

Step 1: Student enters subjects, exam date, available study hours and priorities.

Step 2: AI agent analyzes the information.

Step 3: Agent divides available time among subjects.

Step 4: Agent generates recommendations.

Step 5: If a task is missed, the agent updates the remaining schedule.

Sample Input

I have 3 subjects: AI, DBMS and OS. My exam is after 5 days. I can study 3 hours every day. Create a study plan.

Sample Output

Day 1: DBMS – 2 hours; AI – 1 hour.

Day 2: OS – 2 hours; DBMS – 1 hour.

Day 3: AI – 2 hours; OS – 1 hour.

Day 4: DBMS – 1.5 hours; AI – 1.5 hours.

Day 5: Full Revision + Mock Test.

Results Achieved

The proposed system can generate personalized study schedules, prioritize academic tasks, organize study time, respond to student requirements, modify plans when requirements change and demonstrate multi-step Agentic AI behavior.

Screenshots / Output

Insert screenshots of the AI agent interface, prompt/input, generated study plan and adaptive-plan output here.

4. Conclusion & Future Scope

Project Conclusion

The AI Student Assistant demonstrates how Agentic AI can be used to solve a practical student problem. Instead of only answering questions, the AI agent can understand requirements, analyze information, create a plan, prioritize tasks and adapt the plan when circumstances change.

Challenges Faced

1. Understanding how Agentic AI differs from a normal chatbot.
2. Designing proper prompts.
3. Handling different student requirements.
4. Maintaining information between multiple steps.
5. Creating an adaptive planning process.
6. Ensuring the generated schedule is practical.

Future Enhancements

- Mobile application
- Smart notifications
- Progress dashboard
- Calendar integration

- Voice assistant
- Performance analysis
- Multiple AI agents for study planning, question answering, progress tracking and exam preparation

5. Prompt Engineering concepts

5. System Workflow

Student Input	↓	AI Agent
AI Agent	→	Understand Request
Analysis	→	Subjects + Deadlines + Time
Planning	→	Create & Prioritize Schedule
Output	→	Personalized Study Plan
Feedback	→	Adaptive Re-planning

Note: The uploaded IBM internship template lists the required report areas; this document fills those areas for the proposed AI Student Assistant project.
